

## **Water Tank Concealed Solutions**

Valmont Larson offers a full line of water tanks and fire watch towers as an option for multi-leg camouflage designs. As with most of our concealment structures, the ability to adapt is part of what we do best. Jurisdictional design challenges can be met with a simple and reliable tower designs for multi-leg based products. Our RF-friendly materials are tested in a laboratory and in the field.

- Blends into rural spaces as natural landmarks with true wood textures.
- Capacity for multiple carriers with absolutely no equipment visible.
- Valmont Larson constructs panels with textures integral to the fiberglass itself, ensuring the most realistic, long-lasting product with optimal RF-compatibility.
- The tank and tower structure designs can range from a simple industrial look to detailed architectural wood.
- Fire watch towers can be designed to match fire houses, buildings, or display their own unique look.

### *Types of Concealment*

- WATER TANKS
- FIRE WATCH TOWERS

## LARSON CONCEALMENT SOLUTIONS FOR ANY ENVIRONMENT Water Tanks

- Coaxial cable or fiber lines can be concealed within the legs or a central stand pipe. Legs can be round or square tube construction.
- Depending on equipment required, the structures can house radio units, TMA's, or any other support equipment for the site.
- Design assistance in photo simulations and 3-D renderings.
- RF-friendly materials yield extremely low insertion and return loss properties.
- Passive or active cooling systems and venting available.
- County, town, or development signage and lettering can be added as a popular option to the water tank look.
- Bird screening can be added to open top tanks to discourage wildlife.
